

Instructions

1. You may use either **Flask** and **FastAPI (Mandatory)**.
 2. Do not use a database. Store data in a Python list.
 3. Test all APIs using Postman And Swagger UI.
 4. Submit your source code and screenshots of API responses.
-

Problem Statement

Develop a **To-Do List REST API** that allows users to create, view, update, and delete tasks.

Each task should have the following fields:

```
{
  "id": int,
  "title": str,
  "completed": bool
}
```

Questions

Question 1

Create a project and implement an endpoint to **add a new task**.

Endpoint:

POST /todos

Sample Request:

```
{
  "title": "Finish Python assignment"
}
```

Question 2

Implement an endpoint to **retrieve all tasks**.

Endpoint:

GET /todos

The response should return a list of all to-do items.

Question 3

Implement an endpoint to **retrieve a specific task by its ID**.

Endpoint:

GET /todos/<id> (Flask)

GET /todos/{id} (FastAPI)

If the task does not exist, return an appropriate error message.

Question 4

Implement an endpoint to **update an existing task**.

Endpoint:

PUT /todos/<id>

The user should be able to:

- Change the task title.
 - Mark the task as completed.
-

Question 5

Implement an endpoint to **delete a task**.

Endpoint:

DELETE /todos/<id>

Return a success message after deletion.
